

# Potential next steps for Explore Prototype 2

This presents a potential next iteration that seeks to lead the user through a generous interface. This starts **from** an experience based on human curated, content designed and well described options **to** one where the experience is more data-driven.

## Step 1. You are here

Upon entry the user is presented with:

1. information (visual / textual) about the full holdings of TNA
2. a simple **choice of facets** they can apply as the primary refinement by which to enter the collection. They can choose one.

Note: These primary refinements could be (1) Time periods or (2) Quick filters - or anything else for that matter. **The point is that the user is choosing a curated path and taking their first step**

## Step 2. Recommended next steps

Having applied a primary refinement the user is presented with curated and content designed additional information about:

1. Where they currently are. For example, *"The medieval period covers these significant events/period in history"*
2. Key topics that correspond to the selected refinement.
3. Relevant additional facets

The choice of (2) or (3) represents the next step from here

For example, if the primary facet selected is "Medieval" we would lead the user into key topics and allow them to apply facets as they apply to these

## Step 3. See matches and refine

At this stage the user is presented with the other facets they are able to refine on. For example, if they have proceeded through the "Time Periods" route, they would be presented with the option to apply the "Quick Filters"

## Step 4. See the item

At this stage the user can view an item, which might be a catalogue description (at any level); an exhibition; research guidance; blog post; podcast etc.
