Notes

Recommendations
* Develop the subject taxonomy further by splitting this into topic, sub-topic and type tags.
* Consider adding more tags to a few records. E.g. A record about the Pope's visit to Ireland should probably be tagged with 'Religion'
* Use faceted navigation to allow users to explore the archive's records in many ways.
* Consider a generous interface to overcome difficulties with presenting volume and diversity of topics within the archive

Possible filter notes
Further research required
Geography – Could be a toggle – domestic/foreign/unknown
With/without an image – whether a record is digitised or not. Do not use the term 'Digitised'.
Searchable – Whether a record is indexed and can be searched
